## External TPMS With Monitor-H

This portable monitor is powered by a rechargeable battery and can be mounted on the dashboard with a stand or clipped on the sun-visor. The display can support up to 20 tires on two vehicles, and is an excellent choice for monitoring a motorhome towing a car using the external sensors.

### Main Features:

- Portable, operated by rechargeable battery.
- Supports monitoring a motorhome and a toad on separate screens.
- Monitors tires 24/7 and generates timely warning for tire low pressure, high pressure, high temperature, and slow leaks.
- Warning thresholds for pressure and temperature are user adjustable.
- Motorhome tire low pressure warning thresholds are per axle adjustable.
- Towed car tire low pressure warning thresholds are per axle adjustable.
- LCD backlight can be turned on/off by user for easy night viewing.
- Motorhome or toad monitoring can be disabled/enabled, so that user can monitor the RV itself when not towing a car, or take the monitor to the car while the RV is in storage.

This **flow-thru sensor** for motorhome enables tire air refill without taking out the sensor; it also equipped with set screws that, when fasten, will prevent sensor removal without using a (provided) special Allen wrench.

This light-weighted **cap sensor** for tow car can be easily installed on the tire valve stem and, although small, it can support all monitoring functions: low/high pressure, temperature, and slow leaks. The sensor can also be secured against thief and loss.
